1. INTRODUCTION

1.1 Project Overview

This system "Car Resale Value Prediction" aims to build a regression model to predict used cars' resale value based on multiple aspects, including vehicle mileage, year of manufacturing, fuel consumption, transmission, road tax, fuel type, and engine size. This model can benefit sellers, buyers, and car manufacturers in the used cars market. Upon completion, it can output a relatively accurate price prediction based on the information that user's input. Various regression methods, including linear regression, polynomial regression, support vector regression, decision tree regression, and random forest regression, were applied in the research to achieve the highest accuracy.

This system was implemented as a web application where the user enters the details of the car to get an estimation of the car's resale value.

1.2 Purpose

Car resale value prediction helps the user to predict the resale value of the car depending upon various features like kilometers driven, fuel type, etc. The purpose of this system is of commercial interest to sellers/financer to be able to predict the resale value of cars with better accuracy. The most essential elements for forecast are brand and model, period use of vehicle, mileage of vehicle, gear type and fuel type utilized in the vehicle just as fuel utilization per mile profoundly influences cost of a vehicle because of continuous changes in the cost of a fuel. In view of the differing highlights and factors, and furthermore with the assistance of master information the vehicle resale value forecast has been done precisely.

2. LITERATURE SURVEY

2.1 Existing problem

With difficult economic conditions, it is likely that sales of second-hand imported (reconditioned) cars and used cars will increase. In many developed countries, it is common to lease a car rather than buying it outright. After the lease period is over, the buyer has the possibility to buy the car at its residual value, i.e., its expected resale value. Thus, it is of commercial interest to sellers/financers to be able to predict the salvage value (residual value) of cars with accuracy.

2.2 References

| Project Title | Author | Abstract |
|--|--|--|
| Price Prediction of Used Cars Using Machine Learning | Chuyang Jin | This work aims to build a model to predict used cars' reasonable prices based on multiple aspects. Various regression methods, including linear regression, polynomial regression, support vector regression, decision tree regression, and random forest regression, were applied in the work to obtain highest accuracy. Compared to previous research, the resulting model includes more aspects of used cars while also having a higher prediction accuracy. |
| of Prices for Used Car by using | Prajak Chertchom, Thongchai Kaewkiriya, Suwat | In this work, a model to evaluate price based on big data analysis is proposed. It takes advantage of vehicle data and vehicle transaction data to analyze the price data for each type of vehicles. The work uses optimized Back Propagation neural network algorithm. |
| | Enis gegic, Becir Isakovic, Dino Keco, Zerina Masetic, Jasmin Kevric. | In this work, several distinct attributes are analyzed for the reliable and accurate prediction. The work is to build a model to predict the resale price of cars in Bosnia and Herzegovina |
| price | Praful Rane, Deep Pandya, Dhawal Kotak. | In this work, machine learning models that can accurately predict the price of a used car based on its features was built. They have implemented and evaluated various learning methods on dataset consisting of the sale prices of different models. |

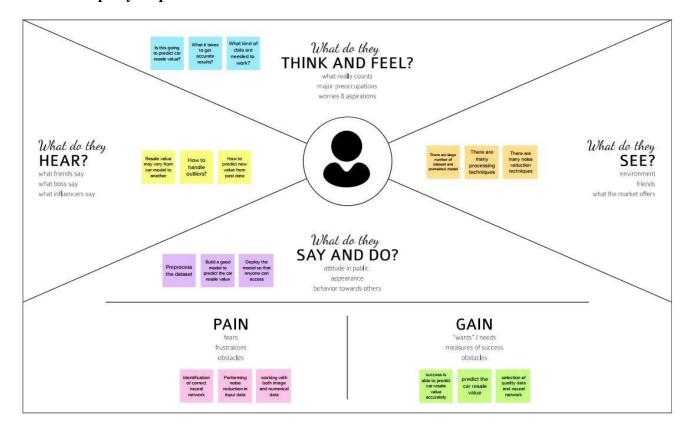

| of Used Car Price Based on | In this work, Extra Trees Regressor, Random Forest Regressor was used. Finally, the algorithm was optimized by using the hyperparameter function. The results show that R2 = 0.9807 obtained from extreme random numbers is the best performance. The algorithm was obtained and validated with new data to derive the final algorithm model. |
|----------------------------------|---|
|----------------------------------|---|

2.3 Problem Statement Definition

It is easy for any company to price their new cars based on the manufacturing and marketing cost it involves. But when it comes to a used car it is quite difficult to define a price because it involves it is influenced by various parameters like car brand, manufactured year etc. The goal of our system is to predict the best price for a used car in the based on the previous data related to sold cars using machine learning.

3. IDEATION & PROPOSED SOLUTION

3.1 Empathy Map Canvas

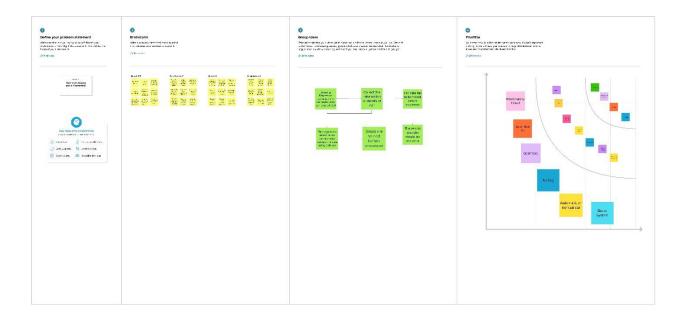

3.2 Ideation & Brainstorming

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Step-2: Brainstorm, Idea Listing and Grouping

3.3 Proposed Solution

| S. No: | Parameter | Description |
|--------|--|---|
| 1. | Problem Statement (Problem to be solved) | With difficult economic conditions, it is likely that sales of second-hand imported (reconditioned) cars and used cars will increase. In many developed countries, it is common to lease a car rather than buying it outright. After the lease period is over, the buyer has the possibility to buy the car at its residual value, i.e., its expected resale value. Thus, it is of commercial interest to sellers/financers to be able to predict the salvage value (residual value) of cars with accuracy. |
| 2. | Idea / Solution description | In order to predict the resale value of the car, we proposed an intelligent, flexible, and effective system that is based on using regression algorithms. Considering the main factors which would affect the resale value of a vehicle a regression model is to be built that would give the nearest resale value of the vehicle. We will be using various regression algorithms and algorithm with the best accuracy will be taken as a solution, then it will be integrated to the webbased application where the user is notified with the status of his product. |
| 3. | Novelty / Uniqueness | Car resale value price data frequently resides in several locations from various sources, such as industries or private persons, to various source systems. The organization as a whole contributes to the data. This data becomes accessible and usable when it is combined into a single, central system, such as an enterprise data warehouse (EDW). |
| 4. | Social Impact / Customer Satisfaction | Enhanced resale value accuracy Improved relationships with customers Leads to increased quality of products and it's related after sales service |

| 5. | Business Model (Revenue Model) | This business plan addresses all relevant concerns by presenting a comprehensive account of monthbymonth marketing strategy coupled with a extensive report on all aspects of the needs of successful used car center. | | |
|----|--------------------------------|--|--|--|
| 6. | Scalability of the Solution | A variety of institutions must store, evaluate, and take action on the massive amounts of data being produced by the car resale industries as it expands quickly. India is a vast, culturally varied nation with a sizable population that is increasingly able to access centralized resale services. | | |

3.4 Problem Solution fit

| Problem Solution fit | | | | | | |
|---|---|---|--|--|--|--|
| 1.Customer Segments + Car mechanic + Customer | 6. Customer Limitation Proper information about the car is to be known by the customer to find the resale value. | 5. Available Solution To predict the resale value of the car, we use an intelligent, flexible, and effective system with web application. | | | | |
| 2. <u>Problems</u> Customer should know the details of their car in web application. | 9. Problem root cause No Proper platform for car resale value prediction. No awareness of resale price of a used car. | 7. <u>Behavior</u> Customers are supposed to enter the car details in the web application to find the resale price of the car. | | | | |
| 3. Triggers to Act 1) When customers decided to sell their car. 2) When car mechanic decides to buy a used car. | 10. Your Solution Using predictive modelling to predict the resale value of car. | 8. Channels ofBehaviour1. Online: car details to be entered in web application. | | | | |
| 4. Emotions Customers get an awareness of the resale price of their own car. | | 2. Offline: customers are supposed to collect the details of their car with the help of a car mechanic. | | | | |

4. REQUIREMENT ANALYSIS

4.1 Functional Requirements

Following are the functional requirements of the proposed solution.

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task) |
|-----------|-------------------------------|------------------------------------|
| FR-1 | User Registration | Registration through Website |
| FR-2 | User Confirmation | Confirmation via website |
| FR-3 | Car Registration | Registering the car details |
| FR-4 | Value Prediction | Predicting the car resale value |

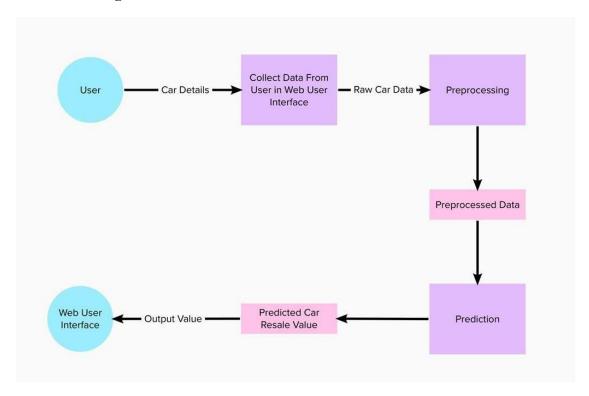

4.2 Non-Functional requirements

Following are the non-functional requirements of the proposed solution.

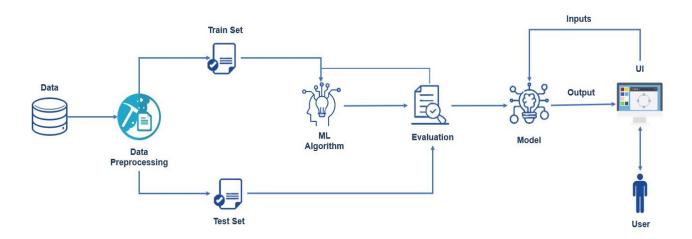

| FR | Non-Functional Requirement | Description |
|-------|----------------------------|---|
| No. | | |
| NFR-1 | Usability | Predicting the resale value |
| NFR-2 | Security | Providing security to the website |
| NFR-3 | Reliability | Providing high reliability by predicting values for different types of cars |
| NFR-4 | Performance | Providing high performance by using some machine learning techniques |
| NFR-5 | Availability | It is used for all types of cars |
| NFR-6 | Scalability | Predicting values for different types of cars |

5. PROJECT DESIGN

5.1 Data Flow Diagrams

5.2 Solution & Technical Architecture

5.3 User Stories

| User Type | Functional Requirement (Epic) | User Story Number | User Story / Task | Acceptance criteria | Priority | Release |
|-------------------------------|-------------------------------------|-------------------------|--|--|----------|----------|
| Customer (Desktop user) | Home Page | USN-1 | As a user, I can view the home page of the web application. | I can view the homepage | Low | Sprint-1 |
| Customer (Desktop user) | Data Entry | USN-2 | As a user, I can enter my car details in the application. | I can enter the car details | Medium | Sprint-2 |
| Customer (Desktop user) | View car Resale value | USN-3 | As a user, I can view the resale value of my car. | I can view my car's resale value | Medium | Sprint-3 |
| Customer (Desktop user) | Resale Value Prediction | USN-4 | As a user, I expect the application to predict the resale value of my car. | I expect the application to predict my car resale price | High | Sprint-4 |

6. PROJECT PLANNING & SCHEDULING

6.1 Sprint Planning & Estimation

| Title | Description | Date | |
|---|--|---------------------------------------|--|
| Literature Survey and Information Gathering | Gathering Information by referring the technical papers, research publications etc. | 3 September 2022 | |
| Prepare Empathy Map | To capture user pain and gains Prepare List of Problem Statement | 10 September 2022 | |
| Ideation | Prioritize a top 3 ideas based on feasibility and Importance | 17 September 2022 | |
| Proposed Solution | Solution include novelty, feasibility, business model, social impact and scalability of solution | - | |
| Problem Solution Fit | Solution fit document | 1 October 2022 | |
| Solution Architecture | Solution Architecture | 1 October 2022 | |
| Customer Journey | To Understand User Interactions and experiences with application | 8 October 2022 | |
| Functional Requirement | Prepare functional Requirement | 12 October 2022 | |
| Data flow Diagrams | Data flow diagram | 12 October 2022 | |
| Technology Architecture | Technology Architecture diagram | 12 October 2022 | |
| Milestone & sprint delivery plan | Activity what we done &further plans | 22 October 2022 | |
| Project Development- Delivery of sprint 1,2,3 &4 | Develop and submit the developed code by testing it | 24 October 2022 – 19 November 2022 | |

6.2 Sprint Delivery Schedule

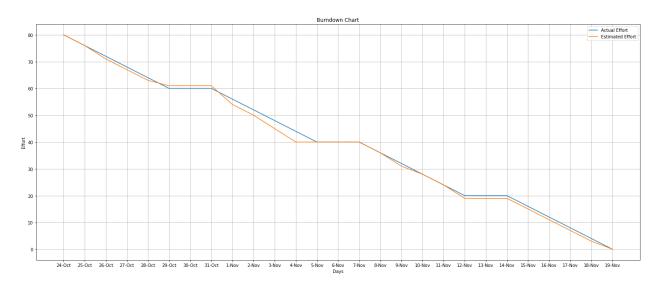

| Sprint | Functional Requirement (Epic) | User Story Number | User Story / Task | Story Points | Priority | Team Members |
|----------|----------------------------------|----------------------|---|-----------------|----------|-----------------|
| Sprint-1 | Home Page | USN-1 | As a user, I can view the home page of the web application. | 20 | Low | Rajesh T R |
| Sprint-2 | Data Entry | USN-2 | As a user, I can enter my car details in the application. | 20 | Medium | Harish M |
| Sprint-3 | Car resale value display | USN-3 | As a user, I can view the resale value of my car. | 20 | Medium | Sam Sundar Z |

| Sprint-4 | Resale Value | USN-4 | As a user, I expect the | 20 | Medium | Vengatesan |
|----------|--------------|-------|----------------------------|----|--------|------------|
| | Prediction | | application to predict the | | | D |
| | | | resale value of my car. | | | |

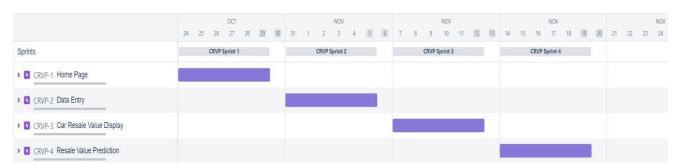

6.3 Project Tracker

| Sprint | Total Story Points | Duration | Sprint Start Date | Sprint End Date (Planned) | Story Points Completed (as on Planned End Date) | Sprint Release Date (Actual) |
|----------|--------------------------|----------|----------------------|------------------------------|---|------------------------------------|
| Sprint-1 | 20 | 6 Days | 24 Oct 2022 | 29 Oct 2022 | 20 | 29 Oct 2022 |
| Sprint-2 | 20 | 6 Days | 31 Oct 2022 | 05 Nov 2022 | 20 | 05 Nov 2022 |
| Sprint-3 | 20 | 6 Days | 07 Nov 2022 | 12 Nov 2022 | 20 | 12 Nov 2022 |
| Sprint-4 | 20 | 6 Days | 14 Nov 2022 | 19 Nov 2022 | 20 | 19 Nov 2022 |

6.4 Burndown Chart

6.5 Reports from JIRA

7. CODING & SOLUTIONING

7.1 Home Page

Displays the home page of the application.

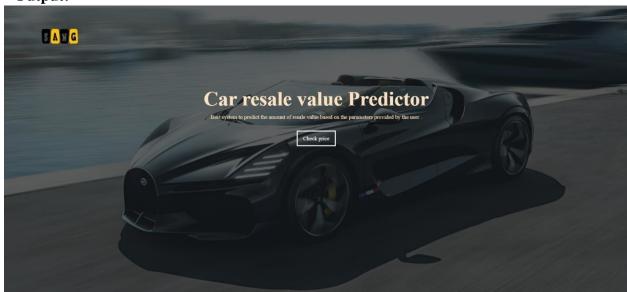

Code:

```
1) car.html
<!DOCTYPE html>
<html lang="en" dir="ltr">
 <head>
  <meta charset="utf-8">
  <title>Car Resale Value Predicting Application</title>
  k rel="icon" type="image/x-icon" href="../static/Images/favicon.ico">

8.3 UAT Report

8.3.1 Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved

| Resolution | Severity 1 | Severity 2 | Severity 3 | Severity 4 | Subtotal |
|------------|------------|------------|------------|------------|----------|
| By Design | 2 | 3 | 1 | 1 | 7 |

| Duplicate | 1 | 0 | 3 | 0 | 4 |
|----------------|---|---|---|---|----|
| External | 2 | 0 | 0 | 1 | 3 |
| Fixed | 2 | 2 | 1 | 2 | 7 |
| Not Reproduced | 0 | 0 | 1 | 0 | 1 |
| Skipped | 0 | 0 | 1 | 1 | 2 |
| Won't Fix | 0 | 2 | 2 | 1 | 5 |
| Totals | 7 | 7 | 9 | 6 | 29 |

8.3.2 Test Case Analysis

This report shows the number of test cases that have passed, failed, and untested

| Section | Total Cases | Not Tested | Fail | Pass |
|------------------------|--------------------|------------|------|------|
| Home Page | 5 | 0 | 0 | 5 |
| Data Entry Page | 15 | 0 | 0 | 15 |
| Output Page | 4 | 0 | 0 | 4 |
| Hyper Parameter Tuning | 3 | 0 | 0 | 3 |
| Final Model Building | 2 | 0 | 0 | 2 |
| Flask Application | 10 | 0 | 0 | 10 |
| Train Model on IBM | 3 | 0 | 0 | 3 |
| Final Report Output | 4 | 0 | 0 | 4 |

9. RESULTS

9.1 Performance Metrics

| S No. | Name | Description |
|-------|----------------|---|
| 1. | Metrics | Regression Model: LGBM Regressor |
| | | MAE : 1327.55 |
| | | MSE : 9492244.28 |
| | | RMSE : 3080.95 |
| | | RMSLE : 8.03 |
| | | R2 Score : 0.8668 |
| | | Adjusted R2 Score: 0.8668 |
| 2. | Tune the Model | Hyperparameter Tuning: |
| | | 1) Learning Rate: [0.01, 0.03, 0.05, 0.07] |
| | | 2) Boosting Type: ['gbdt','dart','goss','rf'] |
| | | 3) Number of Estimators: [100,200,300] |
| | | Validation Method: Grid Search Cross Validation |
| | | Best Parameters: |
| | | 1) Learning Rate – 0.07 |
| | | 2) Boosting Type – 'gbdt' |
| | | 3) Number of Estimators - 300 |

10. ADVANTAGES & DISADVANTAGES

Advantages

- Application is easy to use
- User Friendly
- No Cost
- No need to commission any agent to get car resale value estimate

Disadvantages

- User needs to fill every asked detail of the car
- Doesn't work for cars from different distributions
- Not always accurate

11. CONCLUSION

The increased prices of new cars and the financial incapability of the customers to buy them, used Car sales are on a global increase. Therefore, there is an urgent need for a Car Resale Value Prediction system which effectively determines the worthiness of the car in terms of cost. The proposed system is a web application that will help users to determine the accurate price of used cars.

12. FUTURE SCOPE

In future, large historical data of car price can be used to train the model, and which can help improve the estimation of the machine learning model. Moreover, we can build an application for mobile phone platforms like android, iOS for interacting with users. For better performance, we plan to judiciously design deep learning neural networks.
